

Computer Models For Fire and Smoke

<i>Model Name:</i>	DSLAYV
<i>Version:</i>	1.0
<i>Date:</i>	August 20th 2007
<i>Classification:</i>	Zone model
<i>Very Short Description:</i>	A zone model to predict the environment in a single compartment
<i>Modeler(s), Organization(s):</i>	National Defence Research Institute, Stockholm, Sweden
<i>User's Guide:</i>	A user's guide for DSLAYV: Simulating fires in natural and forced ventilated enclosures, Foa Report C20637, 1986
<i>Technical References:</i>	A technical reference for DSLAYV: Simulating fires in natural and forced ventilated enclosures, Foa Report C20637, 1986
<i>Validation References:</i>	<p>Hägglund, B., Simulating fires in natural and forced ventilated enclosures, FOA Report C20637, 1986.</p> <p>Hägglund, B., Jansson, R. & Nireus, K., Smoke filling experiments in a 6 x 6 x 6 meter enclosure, Foa Report C20585, 1985.</p> <p>Bengtson, S. & Hägglund, B., The use of a zone model in fire engineering applications, The First International Symposium on Fire Safety Science, Gaithersburg, USA, 1985.</p> <p>Bengtson, S., & Hägglund, B., DSLAYV, a helpful engineering tool, J. <i>Availability:</i>	Available from Brandskyddslaget P.O. Box 9196, S-102 73 Stockholm
<i>Price:</i>	There is no cost for the program but there is an appropriate cost for the distribution and documentation of the program
<i>Necessary Hardware:</i>	IBM compatible MS-DOS computer
<i>Computer Language:</i>	Pascal
<i>Size:</i>	600 kB
<i>Contact Information:</i>	Staffan Bengtson staffan.bengtson@brandskyddslaget.se
<i>Detailed Description:</i>	

DSLAYV is a computer program for simulating a growing fire in a single enclosure. The single space is divided into two homogeneous zones. The rate of heat release is defined for the fire and the conservation equations are solved for the zones. The model predicts the growth of ceiling layer, heat and smoke conditions as a function of fire size, room geometry and ventilation conditions. The ventilation can be forced (mechanical ventilation) or non-forced (natural ventilation) and the openings to the outside can be vertically or horizontally oriented.
